

PTAB E2E Workspaces

PTAB E2E Workspaces provides an environment to customize your own experience. You may create up to 7 workspaces, and each workspace contains widgets the display data related to your tasks.

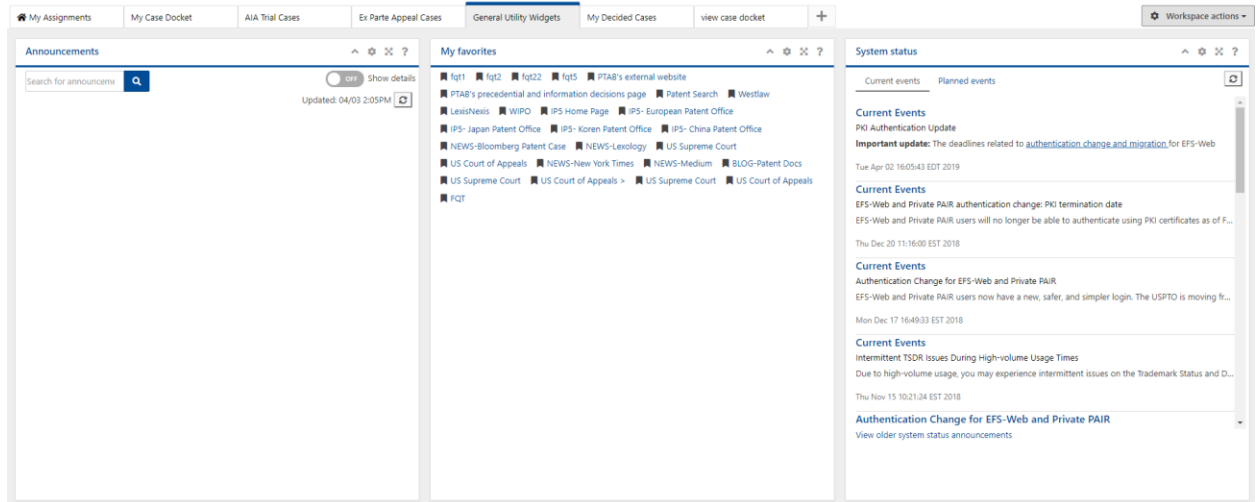

Each workspace contains widgets layout in a user configured format. You can have as many widgets in one workspace as desired.

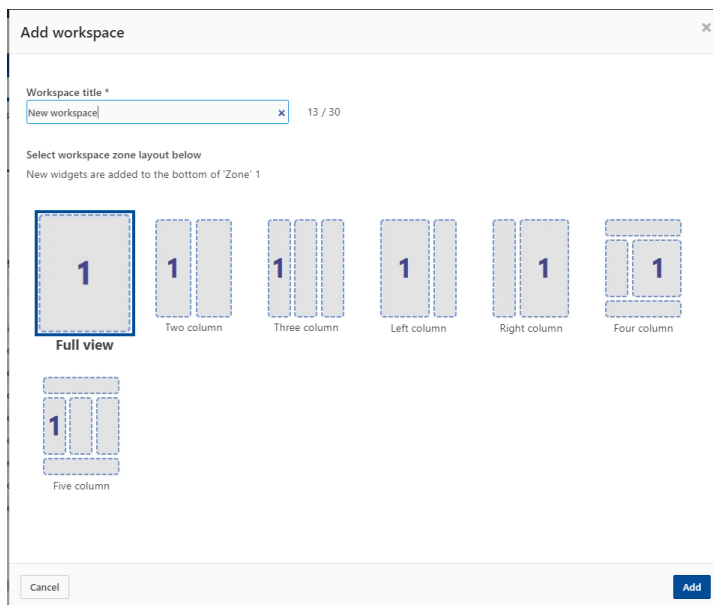

1. Workspaces - A workspace contains widgets. Each workspace can contain multiple widgets. Also each workspace can have may difference layouts. (See “Workspace actions”)

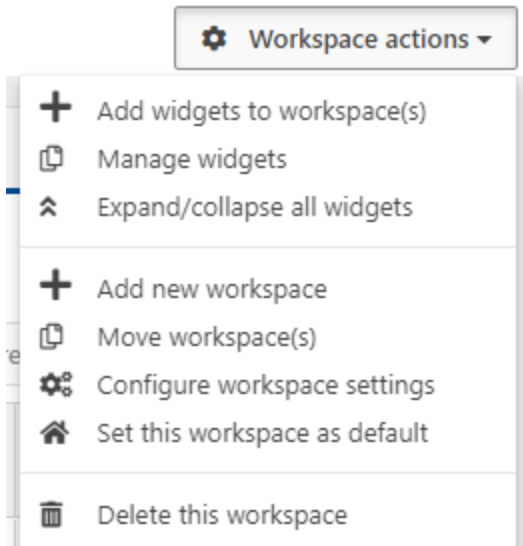

- Each user has a “Home workspace”. This is the workspace the user sees when the page first loaded. The user can change the order of the workspaces and which workspace is the default (make any one workspace the home workspace. User may also change the order of the workspace tabs. (See “Workspace actions”)
- Current workspace – This is the workspace that is currently showing its contents. In this example the “General Utility widgets” workspace contains 3 widgets. (Announcements, My favorites, and System status)

- Add a workspace. User may click the **+** button to add a new workspace.

- Workspace actions

6. Widgets

Each widget contains information related to the type of widget it is. (See 5.1 Add widgets to workspace(s)). A widget also have many different properties they can be configured.
